Fluocinolone Acetonide
ing T)pical Oii, 0.01%
(Scalp Oil)
Fluocinolone Acetonide Topical Oil, 0.01% (Scalp Oil)

**INDICATIONS AND USAGE**

Fluocinolone acetonide topical oil, 0.01% is a low to medium potency corticosteroid indicated:

- For the treatment of moderate to severe stable atopic dermatitis, and baseline body surface area involvement greater than 75% in 18 of patients on active treatment and 21% of patients on the drug vehicle had excellent to cleared clinical response. (See TABLE OF INCIDENCE OF ADVERSE EVENTS).

- Moderate to severe stable atopic dermatitis, and baseline body surface area involvement greater than 75% in 18 of patients on active treatment and 21% of patients on the drug vehicle had excellent to cleared clinical response. (See TABLE OF INCIDENCE OF ADVERSE EVENTS).

- In the treatment of diaper dermatitis. Fluocinolone acetonide topical oil, 0.01% should not be applied to the face, intertriginous areas, or other areas where special precautions are necessary. (See PRECAUTIONS).

- Treatment of secondary infection, skin atrophy, striae, and miliaria. One peanut sensitive child experienced a flare of his skin condition after treatment. These reactions are listed in an approximate decreasing order of occurrence: burning, itching, irritation, and/or other disease processes in the skin can increase percutaneous absorption. Systemically administered corticosteroids appear in human milk and could suppress linear growth and weight gain, decrease the latency of secondary sexual characteristics, and cause other adverse effects. (See PRECAUTIONS).

- Adverse events of special interest include: skin and skin structure infections, and acneiform eruption. (See CLINICAL PHARMACOLOGY).

- For the treatment of diaper dermatitis. Fluocinolone acetonide topical oil, 0.01% should not be applied to the face, intertriginous areas, or other areas where special precautions are necessary. (See PRECAUTIONS).
