STERILE OPHTHALMIC SOLUTION
TIMOLOL MALEATE OPHTHALMIC SOLUTION, USP 0.25% AND 0.5%

DESCRIPTION
Timolol maleate ophthalmic solution is a non-selective beta-adrenergic blocking agent with pharmacologic properties similar to those of other beta-adrenergic blocking agents (e.g., increased heart rate, decreased blood pressure, and increased myocardial contractility, and its inhibition of beta-

INDICATIONS AND USAGE
Timolol maleate ophthalmic solution is indicated in the treatment of open-angle glaucoma.

CONTRAINDICATIONS
Timolol maleate ophthalmic solution is contraindicated in patients with (1) bronchial asthma; (2) a history of bronchial asthma; (3) severe

WARNINGS
After topical ocular administration of beta-adrenergic blocking agents, systemic side effects may occur, particularly in patients with a history of cardiovascular disease. Effects reported include: (1) bronchospasm; (2) a history of bronchial asthma; (3) severe

INSTRUCTIONS FOR USE
Please follow these instructions carefully when using Timolol Maleate Ophthalmic Solution. Use Timolol Maleate Ophthalmic Solution only as directed by your doctor.

1. If you use other topically applied medications for eye disorders, they should be administered at least 10 minutes before or after the use of Timolol Maleate Ophthalmic Solution.

2. Wash hands before and after use of the eye-product.

3. Before using the medication for the first time, be sure the dust cover seal is unbroken.

4. Refer (V) (VI)

Snap off the dust cap by turning it clockwise until the seal is broken. Discard any drops with gentle pressure. Do not touch dropper tip to the surface of the eye.

5. Take the cap off and squeeze the bottle to expel any air from the bottle.

6. Replace cap after use, and screw the cap down.

7. The insert tip is designed to provide a premeasured drop; therefore, do NOT enlarge the hole of the tip.

8. After you have used all doses, there will be some Timolol Maleate Ophthalmic Solution left in the bottle. You should not be concerned about this, as the medication is only used for eye use and will not cause systemic effects.

9. Do not share the container with other people.

10. Keep this and all other medications out of the reach of children.

11. Do not dispose of medications in the sewer or in the natural environment.

12. If you have any questions about the use of Timolol Maleate Ophthalmic Solution, please consult your doctor.

DISCLOSURE
Timolol maleate ophthalmic solution is a non-selective beta-adrenergic blocking agent that does not have significant intrinsic sympathomimetic activity. It is available in two concentrations: 0.25% and 0.5%.

PHARMACOLOGY
CLINICAL PHARMACOLOGY
Mechanism of Action
Timolol maleate is a non-selective beta-adrenergic blocking agent that does not have significant intrinsic sympathomimetic activity. The predominant action may be related to reductions in aortic and venous tone and decreased myocardial contractility, and its inhibition of beta-

OTHER USES
Timolol maleate is a non-selective beta-adrenergic blocking agent that does not have significant intrinsic sympathomimetic activity. It is available in two concentrations: 0.25% and 0.5%.
